

# On holiday

Last summer five friends spent their holidays in Italy, in the same seaside area at different times and different hotels. From the following information, can you deduce each friend's hotel and how far they stay in?

1. Roy vacationed in Hotel Mare Chiaro for longer than Jack but for half of the number of the days that Adam spent at his hotel.
2. One of the women stayed the longest, and didn't stay in Hotel Sole Mio.
3. Jack hadn't booked in Hotel Roma.
4. Diane spent fewer days on vacation than at least one of her friends.
5. The woman staying in Hotel Bella Napoli was on holiday for five days less than Adam.
6. days less than Adam.
7. The person who chose Hotel Roma was not the person who vacationed for a month
